ThinkSmart

ThinkSmart Cam now offers full control of zoom speed and framing latency

Manually adjust as preferred

Users can now choose between two enablement options anytime — full control or automatic speed/latency.
Enjoy a gentler zoom speed

Lenovo has also adjusted the zoom experience for a more natural visual shift. The focus moves with the active speaker.

Set it once or change as needed

A user's full-control settings will persist when the camera is unplugged and plugged back into the Hub or PC.

Using new full-control capabilities

1. Ensure the ThinkSmart Cam's firmware has been updated to the latest version.

AI Functionality		ON
Auto Zoom/Frame		ON
Speaker Tracking		OFF
Whiteboard Recognition		OFF
Zoom Scaling	1X	
Framing Speed	3	
People Count		ON

2. In the ThinkSmart Manager portal or ThinkSmart Cam app, turn AI Functionality and Auto Zoom/Frame to ON.

3. Use the Zoom Scaling drop-down element to manually adjust how close the camera zooms at the subject: 4x (default), 2x, or 1x.

4. Use the Framing Speed drop-down element to manually adjust the latency of the auto-frame (the time between when a change in the frame composition occurs and the auto-zoom begins).

   To avoid a lower-quality user experience, don't adjust the Speaker Tracking parameters.

Smarter technology for all
