Tool Explorer for SMART Board RX series

Meaningful interaction for everyone

Facilitate hands-on learning.

Combine the learning benefits of manipulatives with the flexibility and scalability of digital materials, increasing engagement and knowledge retention.

- **Activities for everyone.** Kinesthetic and tactile learners get the movement, hands-on activity and fine motor experiences they need to explore, learn and retain.
- **Collaborate more meaningfully.** Students can use different objects simultaneously, without being constrained by the tool choice of their peers.

Inclusive access

Support engagement and expression in learners without relying on verbal language, creating an inclusive experience for every student.

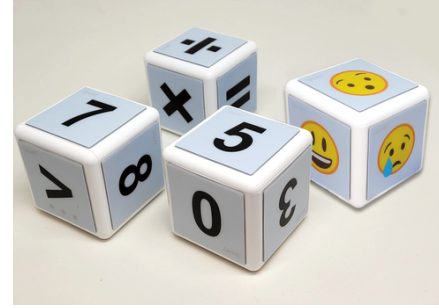

- **Automatic interaction.** No hunting for images, selecting options or manually picking tool types. The iQ whiteboard recognizes the tools and reflects them digitally.
- **Easy-to-grip.** Physical stamps are accessible to those with dexterity limitations.
- **Encourage contribution** from students who are non-verbal or prefer multi-modal communication methods.

Differentiate learning

Students and teachers can interact with content in their own way, at their own pace.

- **Any subject, any expression.** Use tool sets for different learning needs and abilities, providing multiple pathways through lessons.
- **Customize with ease.** The RX series' Tool Explorer app lets teachers change a tool to **any** image with just a tap [[See it in action](#)]
- **Leverage popular images,** included with the iQ gallery folder, to easily customize cubes and stamps.
